Riddle it Out!

1. I turn around once. What is out will not get in. I turn around again. What is in will not get out. What am I?

2. Two fathers and their two sons go fishing together. They each catch one fish to take home with them. They do not lose any fish, and yet when they arrive at home they only have three fish. How can this be?

3. What is at the end of a rainbow?

4. A man wants to enter an exclusive club, but he doesn't know the password. Another man walks to the door and the doorman says 12, the man says 6, and is let in. Another man walks up and the doorman says 6, the man says 3, and is let in. Thinking he had heard enough, he walks up to the door and the doorman says 10, he says 5, and he isn't let in. What should he have said?

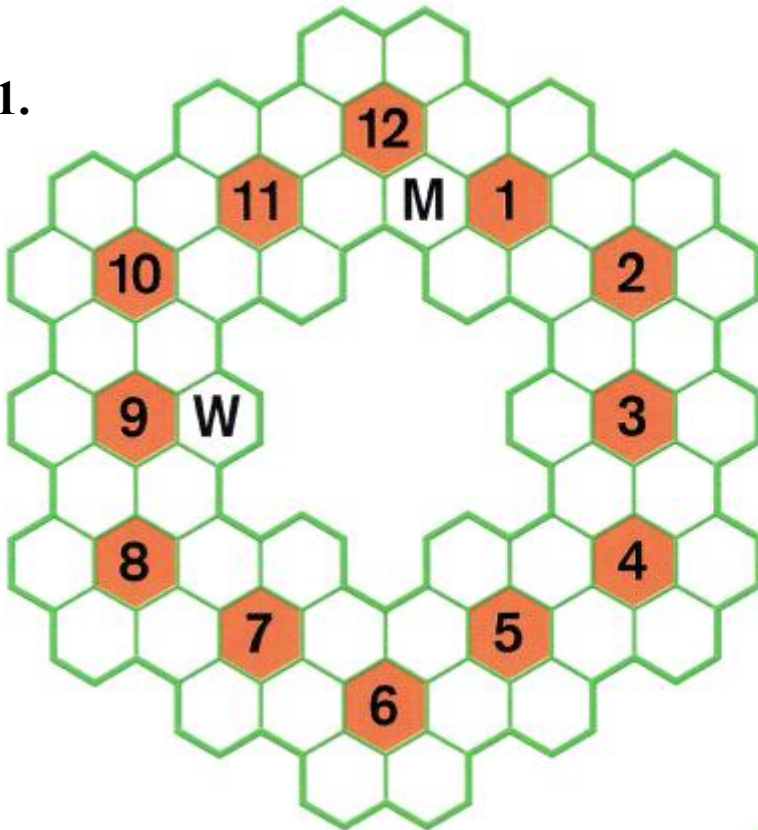

5. What is harder to catch the faster you run?

6. What five-letter word becomes shorter when you add two letters to it?

Hexagon Words

To complete the puzzles, fit each of the listed words into the six spaces around a number, so each word correctly interlinks in the hexagons on either side. Each word has two consecutive letters in common with the adjoining words. The words need to be inserted clockwise or anti-clockwise according to the instructions provided and the colour code of the number. Orange means a word must be entered clockwise and yellow means a word must be entered anti-clockwise.

1.

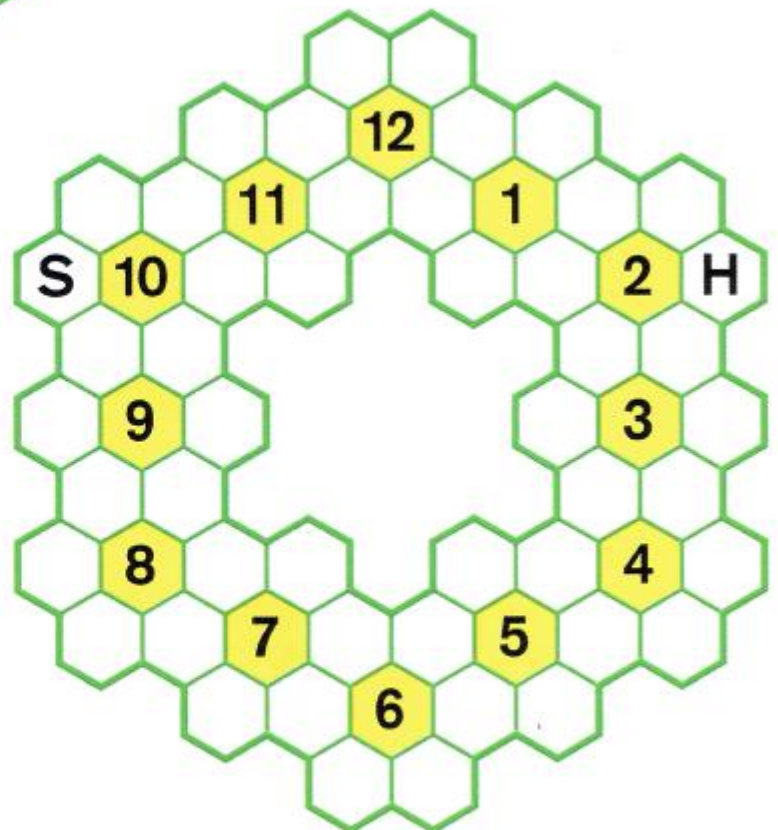

All words must be entered clockwise.

- | | | |
